NOTES FOR “ON OUTRIGGERS” TABLE

- Rated lifting capacities based on crane stability are according to ISO 4305.
- Rated lifting capacities shown in the table are based on condition that crane is set on firm level surface. Those above bold lines are based on crane strength and those below, on its stability.
- The mass of the hook (90 kg for 12,000 kg capacity, 25 kg for 1,800 kg capacity), slings and all similarly used load handling devices must be considered as part of the load and must be deducted from the lifting capacities.
- Jib operation should be based on boom angle irrespective of boom length.
The working radius shown above is reference value with jib mounted to 23.8m boom and 20.1m boom.
- For rated lifting capacity of single top, reduce the 65 kg from the relevant boom rated lifting capacity.
Rated lifting capacity of single top should not exceed 1,800 kg.
- High-speed down hoisting should be performed without any load on the hook.
Be sure to operate the levers slowly.
- Standard number of parts of line for each boom length is as shown below.
Load per line should not surpass 1,800 kg for main winch and auxiliary winch.

Boom length (m)	5.3	9.0	12.7	16.4	20.1	23.8	JIB/Single top
No. of parts of line	8	4	4	4	4	4	1

The lifting capacity data stored in the AUTOMATIC MOMENT LIMITER(AML) is based on the standard number of parts of line listed in the chart.

Maximum lifting capacity is restricted by the number of parts of line of AUTOMATIC MOMENT LIMITER(AML).

- The over-side rated lifting capacity depends on outrigger extension. Rated lifting capacity of over-front and over-rear assume fully extended outrigger position. Working area for each outrigger position are given separately and must be followed accordingly during operation.

NOTES FOR "ON RUBBER" TABLES

1. Rated lifting capacities based on crane stability are according to ISO 4305.
2. Rated lifting capacities shown in the table are based on condition that crane is set on firm level surface, with suspension lock applied. Those above bold lines are based on tire capacity and those below, on crane stability. They are based on actual working radii increased by tire deformation and boom deflection.
3. The mass of the hook (90 kg for 12,000 kg capacity, 25 kg for 1,800 kg capacity), slings and all similarly used load handling devices must be considered as part of the load and must be deducted from the lifting capacities.
4. For rated lifting capacity of single top, reduce the 65 kg from the relevant boom rated lifting capacity.
Rated lifting capacity of single top should not exceed 1,800 kg.
5. High-speed down hoisting and on tires lifting with "jib" is not permitted.
Maximum permissible boom length is 12.7 m.
6. CREEP is motion for crane not to travel more than 60 m in any 30 min. period and to travel at the speed of less than 1.6 km/h.
7. During "CREEP" duties travel slowly and keep the lifting load as close to the ground as possible, and especially avoid any abrupt steering, accelerating or braking.
8. Do not operate the crane while carrying the load.
9. Tires should be inflated to their correct air pressure of 900 kPa {9.0 kgf/cm²}.
10. For CREEP operation, set Drive select switch to "4-WHEEL(Lo)" and set gear shift lever to "1".
11. Standard number of parts of line for each boom length is as shown below.
Load per line should not surpass 1,800 kg for main winch and auxiliary winch.

Boom length (m)	5.3	9.0	12.7	Single top
No. of parts of line	4	4	4	1

WORKING AREA

Without outriggers "Over front" operation should be performed within 2 degrees in front of chassis.
